## Pipeline Management

For safe and efficient construction, rehabilitation and operation.

Constantly changing market conditions require companies and their pipeline projects to exercise agility, while at the same time ensuring consistent security of supply and complying with both ecological and economic requirements. The utilisation of pipelines – and of supply networks – must be aligned with these requirements. Changes in technical requirements may result from on-demand capacity planning, flow reversal, a change of medium or changes in the properties of the medium (power to gas).

TÜV SÜD supports you and your pipeline project with a host of services including inspections, independent assessments, expert reports and development of solutions for complex technical questions – worldwide. Our team of dedicated pipeline experts draw on a wealth of long-standing experience to support clients, helping them to optimise maintenance strategies and establish well-grounded rehabilitation measures that ensure efficient and safe operation and significantly extend service life.

Where challenging technical issues arise, TÜV SÜD supports pipeline operators and planners in ensuring safety and efficiency throughout all phases of a project: from engineering and commissioning to smooth operation and finally rehabilitation.

Call on our expertise to analyse and optimise your pipelines and facilities.

### TÜV SÜD services

- Comprehensive expert activities for new-build projects and facilities in operation
- Condition assessment, damage investigation and analysis
- Development of rehabilitation concepts
- Integrity assessment using internal inspection technologies, i.e. inline inspection tools (ILI-Tools, intelligent pigging techniques)
- Certification of inspection technologies and remediation techniques
- Support and advice all around cathodic corrosion protection
- Hydraulic calculations
- Development of Risk Assessments
- Supplier assessment

### Your benefits

- ▶ Access first-class multidisciplinary technical expertise
- ▶ Ensure legal compliance
- ▶ Benefit from our international presence. We have international representation and can ensure comprehensive support.
